EXPERIMENT 12

SECURITY FEATURES & GOVERNANCE PRACTICES IN ZOHO CREATOR

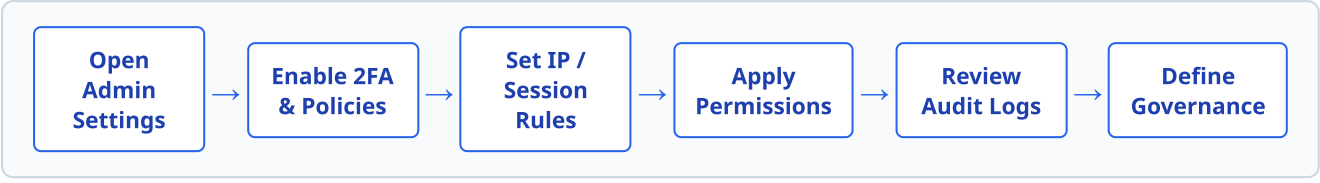

Aim

To implement security features and governance/administration practices in Zoho Creator to protect application data, restrict unauthorized access, and ensure compliance for the **Application Form Management System**.

Procedure

1. Open Zoho Creator admin settings for the Application Form Management workspace.
2. Enable two-factor authentication (2FA) and configure strict password policy parameters.
3. Configure IP restrictions for administrative endpoints and set automatic session timeout durations.
4. Set role-based permissions and field-level access restrictions for sensitive applicant data.
5. Review audit logs, user activity history, and verify continuous backup schedules.
6. Define governance rules including standard field-naming formats, change control processes, and data retention policies.

Security & Governance Workflow

Implementation Matrix

Domain	Configuration Item	Administrative Impact
Authentication	Two-Factor Authentication (2FA) & Password Policy	Prevents unauthorized access to reviewer and admin accounts.
Access Control	IP Restrictions & Session Timeout	Restricts portal access to trusted network ranges and logs out inactive users.
Data Privacy	Field-Level Access Restrictions	Hides sensitive applicant payment details and marksheets from unassigned roles.
Monitoring	Audit Logs & Activity History	Provides complete traceability for record edits, status updates, and exports.
Governance	Naming Rules & Retention Policies	Ensures consistency across workspace fields and regulates record archiving.

Result

Security features and governance practices were successfully implemented in Zoho Creator for the **Application Form Management System**, significantly improving data protection, user accountability, and overall administrative control.
