Experiment 6

ZOHO CREATOR APPLICATION FORM COMMAND CENTER

Aim

To design and build a single internal **Command Center** Page in Zoho Creator for the **Application Form** project, incorporating all eleven Page Builder elements (*Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer*) to provide a unified workspace to monitor, track, and process application entries.

Page Elements Used

Page Element	Element Name / Configured Component
Panel	`Command_Center_Main_Panel`
Board	`Application_Status_Board`
Chart	`Application_Volume_Chart_Widget`
Gauge	`Submission_Target_Gauge`
Search	`Applicant_Search_Bar`
Form	`Quick_Counter_Application_Form`
Report	`Full_Applications_Report`
Snippets	`Application_Guidelines_Snippet`
Button	`Send_Status_Notification_Button`
Widgets	`Quota_And_Fee_Widgets`
Viewer	`Document_Attachment_Viewer`

Page Layout Architecture

Section 1 & 2: Monitoring & Processing

- **Overview Strip:** Target Gauge, Volume Chart, Search Bar
- **Workspace:** Status Board & Notification Button

Section 3, 4 & 5: Operations & Data

- **Detailed Data:** Full Applications Report
- **Sidebar:** Guidelines Snippet, Document Viewer, Quick Form
- **Operations:** Quota & Fee Widgets

Configuration & Access Rules

Component	Configuration & Functionality Detail
Panel	Configured with role-based visibility restricted to authorized admin and reviewer accounts.
Board	Mapped to application processing stages; dragging cards updates application status dynamically.
Chart & Gauge	Auto-refreshes volume trends and displays target submission thresholds with dynamic color triggers.
Search & Form	Multi-field search across ID/Name/Category; embedded form enforces standard validation rules.
Report & Viewer	Provides filtered exports for admins and directly previews uploaded attachments without manual links.
Snippets & Widgets	Centrally managed document requirements; real-time tracking for category quotas and fee status.

Workflow Summary

1. **Step 1:** The administrator opens the Application Command Center to review real-time submission metrics on the Gauge and Chart widgets.
2. **Step 2:** Staff use the Applicant Search Bar to instantly find specific applicant files by ID, Name, or Department.
3. **Step 3:** During verification, staff drag applicant cards across the Status Board columns to update their stage (e.g., Pending, Verified, Approved).
4. **Step 4:** Staff trigger targeted notifications via the action Button for applications needing updates or additional documents.
5. **Step 5:** Manual or walk-in submissions are logged directly using the embedded Quick Counter Application Form.
6. **Step 6:** Comprehensive auditing, data filtering, and administrative exports are handled via the Full Applications Report.
7. **Step 7:** Reviewers reference eligibility rules via the Snippet, check quota availability on the Widget, and verify documents via the Attachment Viewer.

Result

A single internal "Command Center" Page in Zoho Creator for the **Application Form** system was successfully designed, configured, and verified using all 11 core Page Builder elements.
