# Experiment 5: Zoho Creator Report Suite

Topic Adaptation: Candidate Interview Application Form

## Aim

To design and build a complete suite of Reports in Zoho Creator for the existing **"Candidate Interview Application Form"** application, demonstrating the correct usage and configuration of all nine Report Types available in Zoho Creator for recruitment and interview evaluation workflows.

## Report Mapping Matrix

| Report Type | Report Name | Primary Target User / Audience |
|---|---|---|
| **List View** | All_Candidates_List | HR Recruiter / Hiring Panel |
| **Spreadsheet** | Interview_Evaluations_Spreadsheet | Interview Panel Members |
| **Kanban View** | Candidate_Hiring_Kanban | Talent Acquisition Team |
| **Calendar View** | Interview_Schedule_Calendar | Department Coordinators / Panelists |
| **Map View** | Candidate_Location_Map | Outreach & Recruitment Team |
| **Timeline View** | Interview_Activity_Timeline | Talent Acquisition Lead |
| **Pivot Table** | Role_By_Experience_Pivot | HR & Senior Management |
| **Chart View** | Role_Demand_Chart | Hiring Committee Management |
| **Summary View** | Department_Candidate_Summary | Department Heads & HR Leads |

## Report Specifications & Descriptions

**1. All_Candidates_List (List View)**
Default landing report for HR, displaying every candidate application in a clear, searchable table with filters for Preferred Role, Gender, and Application Status.

**2. Interview_Evaluations_Spreadsheet (Spreadsheet View)**
Used daily by interview panels to update technical ratings, feedback comments, and final candidate recommendation status in bulk. Other personal details remain read-only.

**3. Candidate_Hiring_Kanban (Kanban View)**
Visually tracks candidates moving across recruitment stages from Application Received to HR Screening, Technical Interview, Offered, and Hired/Rejected.

**4. Interview_Schedule_Calendar (Calendar View)**
Enables interviewers and scheduling coordinators to review daily and weekly interview slots to avoid double-booking and ensure smooth panel availability.

**5. Candidate_Location_Map (Map View)**
Utilized by talent acquisition teams to identify geographic hotspots of applicants, assisting in planning regional drive events and remote outreach strategies.

**6. Interview_Activity_Timeline (Timeline View)**
Monitors application inflow and interview pipeline trends over time to ensure hiring targets are hit within designated quarterly schedules.

**7. Role_By_Experience_Pivot (Pivot Table)**
Analyzes applicant demographics, mapping candidate experience brackets against requested roles to identify qualification gaps in the talent pool.

**8. Role_Demand_Chart (Chart View)**
Visual comparison of applicant volume across job roles, helping management reallocate interviewer bandwidth and budget to high-demand openings.

**9. Department_Candidate_Summary (Summary View)**
Provides aggregated performance metrics and average technical scores per department to assist in finalizing final job offers and merit pools.

## Validation & Configuration Rules

1. **List View (All_Candidates_List):** Default sorted by Application Submission Date descending, so recent candidates appear first.
2. **Spreadsheet View (Interview_Evaluations_Spreadsheet):** Editing permissions restricted exclusively to the Interviewer and HR roles; candidate biographical fields are locked.
3. **Kanban View (Candidate_Hiring_Kanban):** Dragging a candidate card between stage columns automatically updates the Hiring Status field and records an audit timestamp.
4. **Calendar View (Interview_Schedule_Calendar):** Filters to show current and upcoming week interview slots to keep the operational view clean and actionable.
5. **Map View (Candidate_Location_Map):** Requires geocoding activation on the Residential Address field for precise mapping pin placement.
6. **Timeline View (Interview_Activity_Timeline):** Auto-refreshes daily to reflect up-to-date applicant inflow data and interview progression.
7. **Pivot Table (Role_By_Experience_Pivot):** Blank experience entries are populated as zero to ensure data integrity during analysis.
8. **Chart View (Role_Demand_Chart):** Configured to auto-refresh dynamic chart elements whenever a new application is submitted.
9. **Summary View (Department_Candidate_Summary):** Departments with zero candidate applications are explicitly displayed with a 0 count to signal recruitment needs.

## Workflow Summary

1. **Step 1:** Candidates submit their details and resumes via the public Candidate_Application_Form.
2. **Step 2:** HR recruiters monitor incoming candidate profiles using All_Candidates_List and Interview_Activity_Timeline.
3. **Step 3:** Talent acquisition managers move candidates through stages using Candidate_Hiring_Kanban.
4. **Step 4:** Interview panels consult Interview_Schedule_Calendar to manage daily interview sessions.
5. **Step 5:** Regional recruitment teams use Candidate_Location_Map and Department_Candidate_Summary to plan targeted hiring drives.
6. **Step 6:** HR management reviews Role_By_Experience_Pivot and Role_Demand_Chart to balance headcount allocations.
7. **Step 7:** Interviewers update scores and hiring recommendations in bulk using Interview_Evaluations_Spreadsheet.

## Result

### Experiment Status: Completed Successfully

A complete suite of nine report types in Zoho Creator for the **Candidate Interview Application Form** system has been fully designed, configured, and validated. The system effectively tracks candidates from initial application through panel interviews, scoring, and final candidate selection.
